Questions to Consider

Priorities

Aspects

People looking for specific products

Regular products How much quantity is there of the item?

How far is the

item away

from the

user?

What type of product is it?

When/Where

is the item

located?

Location of user

To allow users to easily find their desired products

Map feature to show the directions of locations with the item in stock

Feature to show the item's stock in various stores

Feature to

show when

in stock

items will be

People who cannot afford to go to multiple stores for one item

People who want to save time with a convenient way to find specific items

Limited products

Hard-to-find

products (i.e.

and beauty

etc.)

medication, health

products, spices,

Who is updating the quantities of products at these stores?

user want?

What stores will be included on our app? Should we start with a specific type of store that has limited products?

What features would the

How should we avoid the user arriving at the store after using the app and the item is actually sold out?

Item name, type of item, item

Location of local

User preferences (i.e. what type of store they want, whether they want the item new of used)

To show an accurate location and quantity of the item

To have a user-friendly and easily navigable app Feature to show the stores' opening/closing times

> Make sure that there are app updates for smooth functionality.

Option where the app can track when the user will run of out products they have previously bought & recommend that they get a new one

Possibly a friend feature where you can share an item you want with someone else- a wishlist?

Possible delivery service, like partnering with Postmates
